

## Region of Peel - Heart Lake Community Recycling Centre

Brampton, ON

### FEATURED PRODUCT

#### Nordock Dock-Lift

Lift table

Controls

Hydraulic power unit

### PROJECT OVERVIEW

A Nordock Dock-Lift double-scissor lift table was previously installed at the Heart Lake Community Recycling Centre in Brampton, Ontario.

Due to a recent change in their operations, the Region of Peel reached out to Northern Dock Systems to determine if they could repurpose their existing Nordock Dock-lift to accommodate pallets which would be moved from the ground level to the bed of a standard pickup truck.

After an initial consultation with Nordock, Northern Dock Systems helped to facilitate the design and re-engineering of the Dock-Lift lift table for the Heart Lake Community Recycling Centre.

The lift table was shipped back to Nordock for refurbishing and changing its lift operation. A new lip was designed to reach past a tailgate while being able to fit into the narrow bed of a pickup truck.

This Nordock custom platform lift table uses high tensile steel rollers, self-aligning spherical bearings and lifetime lubricated brushings at all pivot points. Dock-Lift's high tensile steel rollers help support the lift and add to its superior strength.

Thanks to its versatile design, the Region of Peel's Heart Lake Community Recycling Centre was able to repurpose their existing Nordock Dock-Lift to move heavy loads from the ground level to the bed of a pickup truck.
