

Transforming Barrie's Walmart Supercentre Pharmacy Using a Sliding Door System

Addressing the challenges

- Existing overhead door was broken and jammed.
- The design of Walmart's existing door required the mechanical parts to be sealed within the overhead bulkhead.
- Servicing the required major construction due to the repositioning of the Pharmacy desks and an extended renovation period.
- Existing bulkhead construction did not have the structural strength to support a sliding door system.

The Northern Dock Systems' solution

A sliding, collapsible and see-through bi-parting door system was installed by Northern Dock Systems, completely transforming the aesthetic appeal of Walmart's Pharmacy. The installation occurred during nighttime to avoid any interference with Pharmacy operations.

Additional services rendered by Northern Dock Systems included:

- Suspending a steel beam across the entire Pharmacy door opening to add structural support and provide a place to mount the track for the new sliding door system.
- Completing any drywall repairs and paint touch-ups.
