

# Pepsico Beverages

Mississauga, ON

## Project Overview

Pepsi in Mississauga was looking for a proactive solution to help ensure the safety of their employees in high-traffic warehouse areas.

By installing the [Mirror Alert Dome](#), they are able to provide an automated warning system for pedestrians when forklifts are approaching blind corners, doors and intersections.

The high visibility LED lighting creates an attention-grabbing visual (visible 65-70ft away) compared to traditional mirror domes.

This integrated sensor detects motion and immediately activates LED lighting on both the dome and against the floor with a bright blue spotlight.

Available in two sizes and multiple configurations. In addition, the sensors can be adjusted based on vehicle speed, proximity or isolated to certain areas.

- ✓ Workplace safety
- ✓ Pedestrian safety
- ✓ Operational efficiency

## Featured Products

[Mirror Alert Dome](#)

Increases employee safety and reduces accidents by enhancing pedestrian awareness
