

Adjustable Curtain Dock Seals and Steel Face Dock Bumpers  
Sinclair Supply

Edmonton, AB

Project Overview

The Edmonton branch of Sinclair Supply had missing and damaged dock seals and dock bumpers.

Northern Dock Systems supplied and installed new [dock seals](#) and [dock bumpers](#) to protect their building from truck impacts while sealing in energy savings.

As an approved contractor for Emissions Reduction Alberta, we were able to secure a **\$1,500 energy rebate (\$750 for each door)**. These [foam frame dock seals with adjustable head curtains](#) provide a tight seal for a wide range of truck heights and are great for door openings up to 9' x 10'.

To protect their investment of new dock seals, we also replaced their old and worn laminate dock bumpers with [steel face dock bumpers](#). As a result, these new dock bumpers will stop the dock seals from being overcompressed and extend their life expectancy.

When installing dock bumper and dock seals, getting the right projection and placement is key. This is why we installed 3" risers on the bumpers to ensure the dock bumpers are in the right place to give the best protection against the impact of backing up trucks.

- ✓ Tight seal
- ✓ Improve safety
- ✓ Indoor comfort
- ✓ #1 defense
- ✓ Durability
- ✓ Protects building from damage
- ✓ No white light
- ✓ Energy-savings
