

**Dock Seals**  
Lafert North America

Mississauga, ON

**Project Overview**

Our new client Lafert North America in Mississauga, Ontario didn't have any dock seals. As trucks were frequently backing into the facility to unload shipments, they noticed there were huge gaps around the door which resulted in energy loss.

After reaching out to Northern Dock Systems, our Project Manager was able to assist and have technicians on-site to install three [201 Adjustable Curtain Dock Seals](#). As a result, the dock seals fixed the issue of the gaps around the door allowing, Lafert North America to save money and decrease its energy consumption.

The 201 Dock Seals are an affordable option to create airtight seals between the building and trailer for door openings up to 10' W x 12' H. Also, this product offers adjustable split head curtains that can easily be pulled into place from inside the building once the trailer is in place. This durable, abrasive-resistant fabric can be used to cover the resilient foam pads to create a tight seal against insects, pests, harsh weather, white light, and moisture.

In addition to the improved contamination protection, our client was able to participate in the Energy Rebate and Incentives Program giving them a **one-time energy savings rebate of 71% off their dock seals.**

Not only did our customer receive a one-time rebate, but the installation of the dock seals gave them the financial benefit of continuous annual energy savings along with increased operational efficiency from comfortable indoor temperatures and happy workers.

Also because of these new dock seals, employees near loading docks are working in a safer work environment. Dock seals prevent slips and falls from moisture build-up around the docks along with protection against unlawful entry and security from stolen products.

After the completion of the 201 Adjustable Curtain Dock Seals, the customer was extremely happy with the installation alongside learning about the additional benefits received by Northern Dock Systems and their staff.

- ✓ Improve safety
- ✓ Tight-seal
- ✓ Workplace productivity
- ✓ Indoor comfort
- ✓ No white light
