

Hydraulic Dock Leveler
Property Manager of Etobicoke Warehouse

Etobicoke, ON

Project Overview

The property manager of a warehouse in Etobicoke had an exterior dock that was rusted underneath. The unit was being renovated for a new lease agreement, so they were looking to remove the old dock and replace it with a new dock leveler.

They contacted Northern Dock Systems to remove and replace their loading dock. After removing the dock and cleaning out the pit, our technicians installed a new [Blue Giant 6'x10' Hydraulic Dock Leveler](#).

The new exterior loading dock is powder-coated in rust-resistant black and has [rubber dock weather seals](#) along the sides to withstand harsh Canadian weather. In addition, we have arranged [annual preventive maintenance inspections](#) with the property manager to keep the dock running at peak performance for years to come, even though it is exposed to the elements.

Furthermore, the heavy-duty dock will be long-lasting for the upcoming tenants and even future tenants. Additionally, the dock is suitable for either 3 or 4-wheel forklifts with only 6" of space between the J-beams.

“ Looks beautiful and upgrades the value of the property. - Property Manager ”

- ✓ Improve safety
- ✓ Easy operation
- ✓ Workplace productivity
- ✓ Anti-slip
